

# TWO-WAY CONVEYORS FOR FOUNDRY

## **POSITIVELY CONVEYS IN EITHER DIRECTION**

General Kinematics innovative two-way conveys in either direction with a quiet, smooth, horizontal motion without dusting or damage to fragile materials.

Direction of material flow is easily and immediately reversible at the touch of a button controlling the rotational direction of a single, low horsepower, self contained drive. Minimal vertical acceleration force permits the noise-free movement of castings, sprue, and other metallic parts with reduced trough wear.
