

UN-COALER™ ACTIVATOR/FEEDER

BIN ACTIVATION AND FEEDING

Vibratory bulk material reclaim has never been so dependable or versatile for rates up to 2,000 tons per hour. The Un-Coaler combines the flow control characteristics of a totally enclosed vibrating feeder with proven bin activation. Since the unit discharges material vertically to conveyor below, loading is always centered and symmetrical. This feature helps to eliminate belt tracking problems common to side feeding. Un-Coaler also helps eliminate bridging and other issues found with other metering options.

FEATURES

- Unique center dome design works as a pile activator or vibratory hopper bottom to help move difficult materials.
- Compact, low equipment profile reduces foundation costs, fits in tight spaces, and simplifies installation.
- Fully controllable for infinitely variable feed rates to link with automated control systems -- accurately controls various proportioning and blending operations.
- Versatile design adapts to reclaim in windrows, storage barns, silos, truck or rail hoppers.
- Two-Mass drive design is energy efficient, reducing cost of operation.
