

# LOAD-RITE™ Scrap Handling Systems

Minimization of empty container space is important to maximize your profitability of each container load. GK's container loading systems allow you to completely fill your container from back to front.

Material is directly loaded onto GK's heavy-duty Paramount II® vibratory feeders, and is evenly distributed onto a loading belt or apron conveyor which is inserted into your container. As the truck slowly pulls forward, the belt continuously feeds the container until it reaches maximum volume.

## Features:

- Heavy-Duty feeder withstands heavy impact
- Low horsepower design reduces energy requirements
- Systems are available in fixed and skid mounted designs

**GK offers two styles of systems depending on your product mix:**

## Ferrous Shred

- 20' or 40' Overseas Containers.
- Fill 45,000 lbs in under 10 minutes.
- Standard size hopper to suit bucket loader.
- Vibratory Two-Mass Feeder minimizes bridging and eliminates bulky piles.
- Gentle transition onto high speed belt conveyor.
- Optional belt scale for precise control.

## HMS #1 & #2

- 20' or 40' Overseas Containers.
- Fill 45,000 lbs in under 15 minutes.
- Standard size hopper to suit bucket loader.
- Vibratory Two-Mass Feeder to minimize bridging and bulky eliminate piles.
- Gentle transition onto high speed belt conveyor.
- Dual mode system – pile building and filling.
- Minimize damage to containers.
- Optional belt scale for precise control.

*Material is directly loaded onto GK's Para-Mount II feeder which then meters material onto belt for even and consistent loading.*
