

UN-COALER®

For Bio-Mass and Fuel Preparation

Bin activator and Two feeders in one

Vibratory bulk material reclaim has never been so dependable or versatile. The General Kinematics UN-COALER® Activator / Feeder is a state of the art solution to feeding and metering material.

The UN-COALER® combines the flow control characteristics of both totally enclosed vibrating feeders with bin and pile activation.

Since the unit discharges material vertically to the conveyor below, loading is always centered and symmetrical. This features helps to eliminate belt tracking problems common to side feeding. The UN-COALER® also helps eliminate bridging and other issues found with alternative metering options.

Features

- ✓ Low headroom design for a significant reduction in tunnel height requirements
- ✓ No gates or moving parts in direct contact with materials
- ✓ Symmetrical and centered loading for accurate belt and material tracking
- ✓ Eliminates bridging
