

VIBRATING CONVEYORS FOR WOOD PROCESSING

More Than Just Conveying

Technically advanced vibrating conveyors are a tradition at General Kinematics. No matter how difficult your application, chances are we have solved a similar material flow problem -- not only for materials that need to be moved, but a number of processes along the way, including separating, screening, classification, distribution, sorting, inspection, and more. Travel can be up, down, or all around your facility with SYNCRO-COIL® vibrating conveyors.

Features

- ✓ SYNCRO-COIL® drive eliminates load dampening
- ✓ Heavy-duty construction withstands overloading and impacts
- ✓ Optional screening sections to remove fines
- ✓ Natural frequency design uses very little energy during operation
- ✓ Conveyors can be designed to incline, decline, or go around corners
