

SHEAR TAKE-AWAY CONVEYOR

Rugged & reliable scrap processing

General Kinematics Shear Take-Away Conveyors are specifically designed to handle the severe conditions found underneath shears in scrap processing operations. Heavy-duty wear resistant troughs handle the impact of falling material while the exclusive General Kinematics SYNCRO-COIL® Drive is designed to handle the force of even the largest impacts without damage to the conveyors' drive system.

SHEAR TAKE-AWAY CONVEYOR

Features

- Heavy-Duty AR Liner - Thick, replaceable, standard in the impact load area.
- Down Stops - Heavily reinforced load area with down stops to absorb the large material impacts.
- Side Discharge - Fines removal section with side discharge chute at the discharge.
- Slave Trough - Complete with down stops for maximum loading.
- Motion Switch - Sensor to warn of restricted movement.
- Custom Sizes - To match existing units or for new installations.
- Energy Efficient - Natural frequency design minimizes power requirements.
- Coil Spring Drive - Absorbs momentary impact loading saving the drive bearings.

Available in custom-engineered sizes for your specific application.

Optional FINGER-SCREEN™ section for removal of fines material.

Slave driven impact section allows conveyor to compensate for material jam-ups.
